## Introduction

This document describes the Implementation Guidelines for the XML SEPA Direct Debit Initiation message UNIFI (ISO20022) - “pain.008.001.02” in the Netherlands.

These Implementation Guidelines provide guidance on the use of the SEPA Direct Debit Initiation Message sent to Banks residing in The Netherlands. These guidelines are compliant with:

- ISO20022 – Message Definition Report edition September 2009
- EPC - SEPA Core Direct Debit Scheme Customer-to-Bank Implementation Guidelines, version 6.0, issued 17 November 2011 (EPC130-08)
- EPC - SEPA Business-to-business Direct Debit Scheme Customer-to-Bank Implementation Guidelines, version 4.0, issued 17 November 2011 (EPC131-08)

These guidelines can be used as of the date of release and replace all previous versions. No changes will be made anymore to any previous versions.

These Implementation Guidelines have been developed by the Dutch Payments Association (DPA). The utmost has been done to make sure the information in this publication is correct. However, the DPA can by no means be held responsible for any loss or damage incurred to any incorrect or incomplete information as described in this publication.

Please contact your bank for any further information.

## Change History

New releases of the Implementation Guidelines are published on a regular basis, based on new versions of the underlying standards or to provide clarification where required. The following table provides an overview of the versions released to date.

Version	Date
2.0	October 2010
2.1	November 2010
2.2	February 2011
5.0	January 2012
5.0.1	February 2012
6.0	March 2012

Versions are numbered x.y(.z). As from this version it has been decided to align the version numbering with that of the implementation guidelines as published by the EPC regarding the SCT. In case a new version of this document is released (mainly as a result of clarifications or error corrections) before the EPC releases a new version of the implementation guidelines, an additional minor release indicator z will be added (e.g. 5.0.1 for an updated version of this document).

**The following additions and modifications have been made in version 6.0 compared to version 5.0.1:**

- Addition of 'COR1' to 2.12 Code as part of choice 2.11 LocalInstrument and modification of Usage Rule concerning "The mixing of different local instrument values is not allowed in same message".
- Addition of AT-12 : BIC of Creditor Bank to ANNEX C "Rulebook attribute equivalent"
- Addition of reasoncode AC13: Debtor Account is a consumer account to ANNEX E "ISO reasoncodes used"

## Direct debit definition

A European Direct Debit is a payment instrument for making collections in Euro throughout SEPA from bank accounts designated to accept collections. The current definition of SEPA encompasses the EU member states together with Iceland, Liechtenstein, Monaco, Norway, and Switzerland.

Transactions for the collection of funds from a Debtor's account with a Debtor Bank are initiated by a Creditor via its bank (the Creditor agent) as agreed between Debtor and Creditor. This is based on an authorization given to the Creditor by the Debtor for the debit of its bank account: this authorization is referred to as the 'Mandate'. The Debtor and Creditor must each hold an account with a bank participating to the SEPA direct debit scheme.

Both Core and Business-to-Business European direct debits are described in this document.

The SEPA Core Direct Debit Scheme is intended for (but not limited to) payments where Debtors are consumer entities. The SEPA Business-to-Business Direct Debit Scheme is intended for business payments where Debtors are business rather than consumer entities.

Both recurrent and one-off collections can be processed. Recurrent direct debits are those where the authorization by the Debtor is used for regular direct debits initiated by the Creditor. One-off direct debits are those where the authorization is given to initiate only one single direct debit, authorization which cannot be used for any subsequent transaction. All transactions must be in Euro.

## Coverage

The Customer Direct Debit Initiation message is sent by the initiating party to the creditor agent. It is used to request bulk collections of funds from one or various debtor's accounts for a creditor. The Customer Direct Debit Initiation message can contain one or more direct debit instructions. The message can be used in a direct scenario, which means that the message is sent directly to the creditor agent. The creditor agent is the account servicer of the creditor.

The message can also be used by an initiating party that has authority to send the message on behalf of the creditor. This caters for example for the scenario of a payments factory initiating all payments on behalf of a large corporate.

The Customer Direct Debit Initiation contains mandate related information, i.e. extracts from a mandate, such as Mandate Identification and Date Of Signature. The customer Direct Debit Initiation message must not be considered as a mandate.

## Use of these Guidelines

Each item of the DirectDebitInitiation message refers to the corresponding index of the item in the ISO 20022 Message Definition Report for Payment Standards – Initiation. This Report can be found on [www.iso20022.org](http://www.iso20022.org), under “Catalogue of ISO 20022 messages”, with “pain.008.001.02” as reference. ([www.iso20022.org/documents/general/Payments\\_Maintenance\\_2009.zip](http://www.iso20022.org/documents/general/Payments_Maintenance_2009.zip)).

This document is based upon the UNIFI (ISO 20022) XML message standards and the EPC SEPA Direct Debit Core and B2B scheme customer-to-bank implementation guidelines. These implementation guidelines can be found on: [http://www.europeanpaymentscouncil.eu/content.cfm?page=sepa\\_direct\\_debit\\_\(sdd\)](http://www.europeanpaymentscouncil.eu/content.cfm?page=sepa_direct_debit_(sdd)). In addition the Dutch specific usage rules are added.

The description of each message item contains:

Index	Number that refers to the corresponding description in the UNIFI (ISO 20022) Message Definition Report for Payment Standards – Initiation
XML Tag	Short name that identifies an element within an XML message, that is put between brackets, e.g. <Amount>
Occurrences	<p>This indicates whether an element is optional or mandatory and how many times the element can be repeated. The number of occurrences is shown in square brackets</p> <p>For example:</p> <ul style="list-style-type: none"> <li>[0..1] shows that the element can be present 0 times or 1 time. The element is optional</li> <li>[1..1] shows that the element can only be present 1 time. The element is mandatory</li> <li>[1..n] shows that the element is mandatory and can be present 1 to n times</li> </ul> <p>An element, that is part of a block of elements, is mandatory as far as the block it is part of, is present in the message.</p> <p>If only one of several elements may be present, this is indicated by {OR ... OR} before the elements concerned.</p>
Format	This specifies the permitted values and format

Definition	This contains the definition of the message block or element
Usage ISO	Additional info how this element must be used according to the ISO standards
Usage EPC	Any specific rules that could impact the presence or the values of an element as set in the SEPA Direct Debit scheme customer-to-bank implementation guidelines
Usage NL	Any additional rules as set by the DPA specific for the Dutch community

## Character set

The UTF-8 character encoding standard must be used in the ISO 20022 messages.

The Latin character set, commonly used in international communication, must be used.

It contains the following characters:

a b c d e f g h i j k l m n o p q r s t u v w x y z  
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z  
0 1 2 3 4 5 6 7 8 9  
/-?:( )., '+  
Space

Note: the above is about characters that can be used within the tags. For the message itself also other characters (especially < and >) can be used.

## Message Structure

The description of the ISO 20022 document models can be found in a number of schemes. A specific description language (XSD) is used in those schemes. The schemes make it possible to give a description of the tags in the document, the structure and sequence of those beacons (hierarchy of tags) as well as the codes which are allowed for some specific data, the number of possible cases, the obligatory or optional character of some of the data, etc.

The general XSD for pain.008.001.02 can be downloaded from:

[www.iso20022.org](http://www.iso20022.org), under "Catalogue of ISO 20022 messages", with "pain.008.001.02" as reference  
<http://www.iso20022.org/documents/messages/pain/schemas/pain.008.001.02.zip>

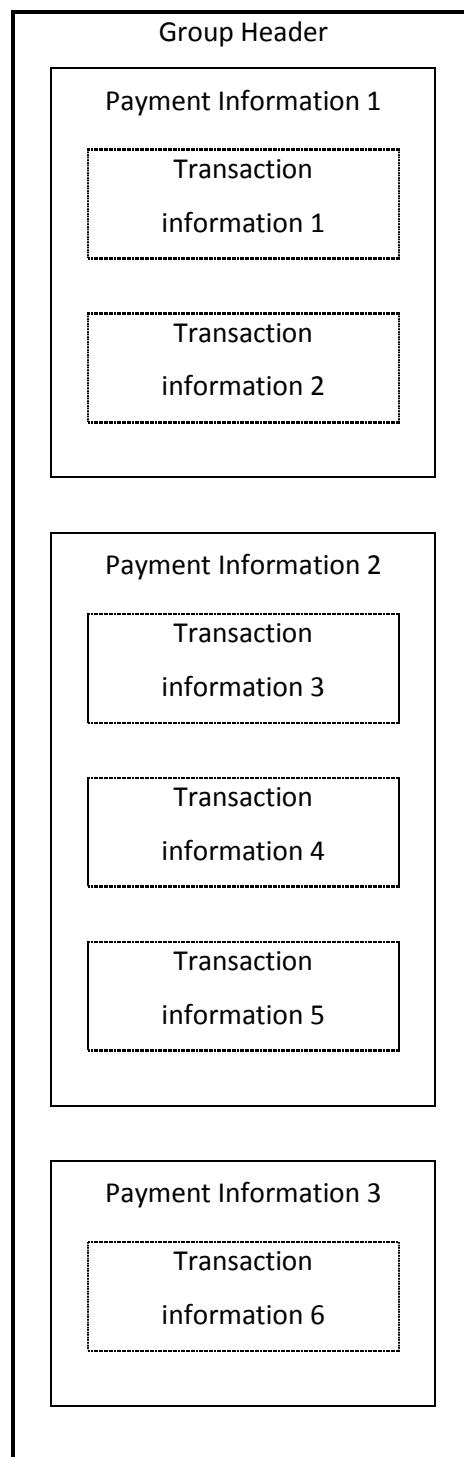

A file containing an XML- pain.008.001.02 message has the following structure:

```
<?xml version="1.0" encoding="UTF-8"?>
<Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.008.001.02" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <CstmrDrctDbtInitn>
        message content ...
    </CstmrDrctDbtInitn>
</Document>
```

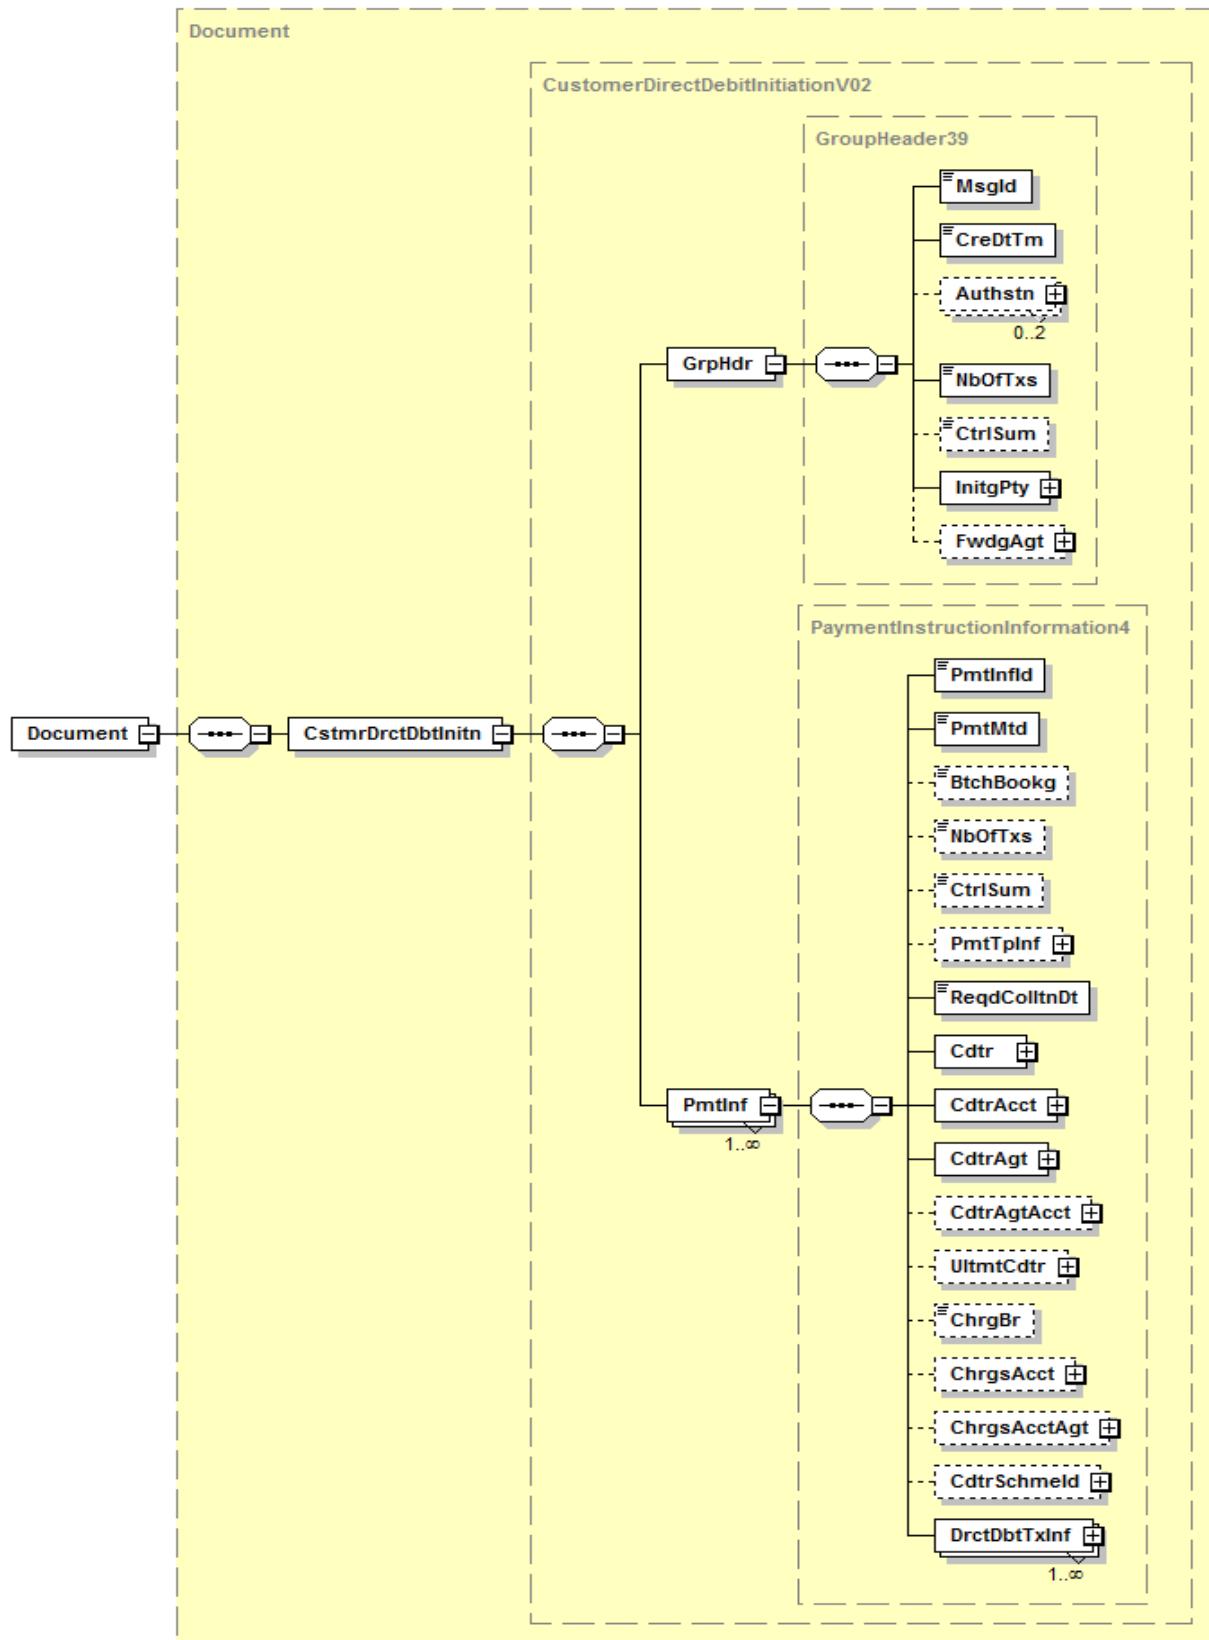

A file must contain one single Document (envelope), with one single XML message in it. For an example message is referred to the Annex. The support of multiple documents per file must be agreed bilaterally with your bank.

The Customer Direct Debit Initiation message is composed of 3 building blocks:

- A. Group Header: This building block is mandatory and present once. It contains elements such as Message Identification, Creation Date And Time, Grouping indicator.
- B. Payment Information: This building block is mandatory and repetitive. It contains, amongst others, elements related to the Credit side of the transaction, such as Creditor and Payment Type Information.
- C. Direct Debit Transaction Information: This building block is mandatory and repetitive. It contains, amongst others, elements related to the debit side of the transaction, such as Debtor and Remittance Information Rules.

A detailed view on the structure of a Direct Debit Initiation Message is presented below.

## Annex D Overview ISO codes

The ISO 20022 Payment messages use 'external code lists' which are validated and approved by the Payments SEG.

The listed code values can be used in specific elements of the payments messages as indicated in the documents below. Unlike other ISO 20022 code lists, the code values are not included in the XML message schema with the message element they type. The purpose of externalising these code values is to be able to update the code lists (e.g. add new code values) without impacting the message themselves and, hence, without requiring the development of a new version of the messages that use these code lists.

25 external code lists are published in a spreadsheet which is versioned at three levels: the spreadsheet itself has a publication date, each list within the spreadsheet has a publication date (see 'CodeInventory' sheet) and each individual code value has a date of last update ('status date').

See [www.iso20022.org](http://www.iso20022.org), under "External Code Lists, Data Source Schemes (DSS), Variants and Supplementary Data", with "External Code Lists spreadsheet" as reference.

[http://www.iso20022.org/External\\_Code\\_Lists\\_and\\_DSS.page](http://www.iso20022.org/External_Code_Lists_and_DSS.page)

Out of the external code list, the next annex includes the reason codes as these have a restricted set of values within SEPA messages.

## Annex E ISO Reason codes used

The reasons for the reversal presented in the Rulebook are mapped to the ISO codes as follows. Other codes may be used when the Creditor has requested the reversal.

<b><i>ISO Code</i></b>	<b><i>ISO Name</i></b>	<b><i>SEPA Reason as specific in the Rulebook</i></b>
AM05	Duplication	Duplicate entry
MS02	NotSpecifiedReasonCustomerGenerated	Reason not specified

The reasons for a reject by the Creditor Bank, the Debtor Bank or the CSM as present in the Rulebook are mapped to the ISO codes as follows. Other codes may be used when the Creditor Bank has rejected the message.

<b><i>ISO Code</i></b>	<b><i>ISO Name</i></b>	<b><i>SEPA Reason as specific in the Rulebook</i></b>
AC01	IncorrectAccountNumber	Account identifier incorrect (i.e. invalid IBAN)
AC04	ClosedAccountNumber	Account closed
AC06	BlockedAccount	Account blocked Account blocked for Direct Debit by the Debtor
AC13	InvalidDebtorAccountType	Debtor account is a consumer account

AM04	InsufficientFunds	Insufficient funds
AM05	Duplication	Duplication collection
BE01	InconsistentWithEndCustomer	Debtor's name does not match with the account holder's name
FF01	InvalidFileFormat	Operation/transaction code incorrect, invalid file format Usage Rule: To be used to indicate an invalid file format

MD01	NoMandate	No Mandate
MD02	MissingMandatoryInformationInMandate	Mandate data missing or incorrect
